1 Motivation

Both members of the project team work at the Department of Banking and Finance UZH as web developers parallel to their studies achieving their Master's degree in Informatics.

2 Project Description

The "Portfolio Management Game" was initially developed in 2001 by an external company for the Department of Banking and Finance. This simulation of a portfolio manager was being used from the DBF over several years by multiple seminars of their department. A course named "Advanced Portfolio Seminar" has given insights to the Portfolio Management process for Master students by playing the game in between different rounds playing the game. For the final seminar of the "Executive Education" the game was being played for two days on Uetliberg with all the executive students. The game has been deprecated by its implemented technologies and after each round the supervisors had to collect a USB-stick where all decisions of the students have been saved to. The supervisors had to collect this data of each group on a central device with administrative access to calculate the result of the teams decisions.

3 Procedure

A first task was to understand the concept of a typical investment advisory process.

3.1 Basic Requirements Engineering

User stories

3.2 Game Observation

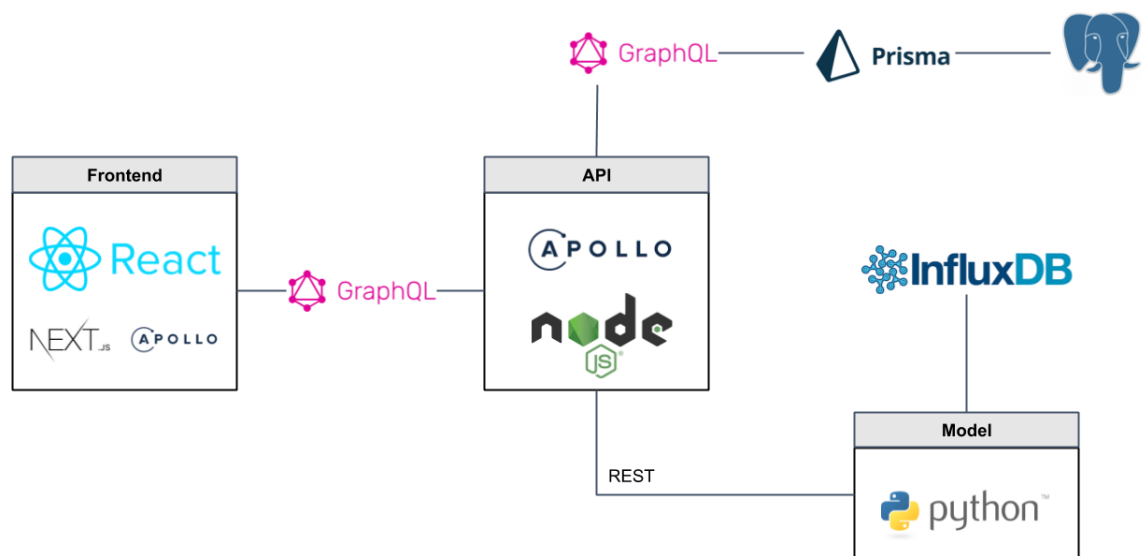

The game observation was separated in following parts:

- Executive Education Students Observation during their final seminar at the Uetliberg
- Observation of different knowledges in one room
- Master Seminar: Advanced Portfolio Management Seminar

3.3 Implementation

Iterative Prototyping

4 Architecture

4.1 Frontend

We use the React Framework which is developed by Facebook. Based on NextJS.

4.2 API

Bla

4.3 Model

All calculations of the simulation are performed in a python-model which interacts with the time series data stored on an InfluxDB. A Restful service fetches the data from the model.

5 Application Overview

5.1 Administration

5.2 Team View

6 Future Development
